Overview

What is a PV-T solar panel?

PV-T is a hybrid solar panel combining the functionality of solar thermal collectors and solar PV in one panel. The panels create not only electricity but also produce hot water for use in the home. Two functions from one investment! Contrary to popular belief, solar PV panels actually work more efficiently in cold sunny weather.

What is a PVT solar module for central heating?

PVT solar module for central heating. Solar PV & Solar thermal in one unit, save half transport freight, Labor cost and installation area. Make full use of solar energy, one of our PVT solar module will output 20% electric energy and 50% thermal energy, total reach 70%.

How much does a solar PVT system cost?

The cost of solar PVT systems ranges depending on the manufacturer, capacity of the system, components included and the installer. As there are not a lot of approved and experienced installers of these systems, the price could also be affected quite significantly by travel costs. A 4kWp system could cost around £10,000 installed.

How do PVT solar panels work?

PVT solar panels are set up into the collectors where the fluid transmits. The transmission happens in the middle of plates and water cylinders. The photovoltaic and thermal cells efficiently absorb sunray's heat. Then the produced warmth passes through solar thermal components. Then, the generated fluid heats up and is used for multi-purposes.
