# Renovation of solar air conditioner

## Overview

---

What is a solar powered air conditioner?

A solar powered air conditioner is using a modern air conditioning system with renewable energy technology for a cheaper and less impactful way of cooling. Solar panels generate direct current (DC) electricity, which is converted to alternating current (AC) using an inverter—allowing your air conditioner to operate seamlessly.

How much does a solar AC cost?

We found that the investment in a solar AC generally pays for itself within 10 years of purchase. Angi reports the average homeowner spends \$3,400 on a solar air conditioner. In general, they cost \$1,600-13,000. Mini splits are more affordable, while solar-powered central air conditioners cost more.

How does a solar AC work?

In simple terms, solar ACs use solar panels to power the air conditioning system. Solar panels collect energy from the sun. They convert this energy into power. That power either goes directly to the air conditioner or to a battery where it's stored until the AC needs it.

Can solar energy be used in air conditioning?

One such application of this renewable energy source is in air conditioning, through solar air conditioners. These heating and cooling appliances can work by using the sun as an energy source. Reduced energy bills and minimal environmental impact are just some of the benefits which this energy source provides.

## Renovation of solar air conditioner
