Reset circuit breaker factory in Singapore

Overview

How to reset a circuit breaker Power Trip in Singapore?

To reset a circuit breaker power trip in Singapore, particularly in HDB flats, start by identifying your HDB electrical box, electrical distribution panel or circuit breaker box, also known as a DB box. This is where you'll find your circuit breakers, which act as electrical safety devices for your home.

How does a circuit breaker work in Singapore?

When the breaker “trips,” it cuts the power to certain circuits or, in some cases, the whole house. In Singapore, most homes are equipped with a distribution board or also known as a DB box, which houses circuit breakers and the Residual Current Circuit Breaker (RCCB), they controls power in all parts of the home.

How to reset a power trip in Singapore?

To reset a power trip in Singapore, locate your main electrical panel and find the breaker box. A power trip occurs when an overload or short-circuit causes the breaker to switch off, halting the flow of electricity as a safety measure. Resetting it by simply flipping the switch back to its 'on' position, restoring power to the affected circuits.

What is a power trip in Singapore?

A power trip is when there is an electric overload, causing the circuit breaker to trip and the power to go off. This can be a common occurrence in Singapore due to the high humidity and frequent thunderstorms. When a power trip happens, it is important to know how to reset the circuit breaker to restore power.
