Rooftop public solar water pump

Overview

What is a solar powered water pump?

A solar powered water pump is an eco-friendly, off-grid solution that uses solar energy to move water from wells, rivers, ponds, or tanks—without needing electricity or fuel. Perfect for farms, homes, and remote areas, these pumps are powered by photovoltaic panels and come in both surface and submersible options.

Should you switch to a solar water pump?

For large-scale irrigation, go for 24V or 48V systems. If you're living off-grid, farming, or just tired of high electricity bills, switching to a solar powered water pump is one of the smartest moves you can make. It's sustainable, affordable, and effective. You don't need to be a technician to set one up.

How does a water pump work?

The water pump (either surface or submersible) pushes or pulls water. Water flows into your tank, irrigation lines, or taps —all day, every day. This process works even in cloudy weather, especially if paired with battery storage or water storage tanks.
