## Overview

---

What is the output power of a single phase solar inverter?

1. Net connected single phase solar inverters with MPP tracking for in serie connected PV-cells have a typical output power of 1.5 to 6kW. Heavier inverter systems have an output power up to 100kW and sometimes higher. The unipolar bridge circuit provides the best efficiency for modern solar inverters.

How many kW can a single phase inverter run?

Up to about 5kW single phase inverters are used with a maximum DC-voltage of 500V. The boost converter also operates as a MPPT as already mentioned. The output inverter can be configured as a unipolar single phase bridge converter (fig. 15-28) or as a single phase 3-level NPC inverter (fig. 15-27).
