# **Smart lighting and energy storage products**

## Overview

---

What is a smart lighting system?

A lamp/luminaire that can be controlled via a wireless signal using a smart-phone, remote control unit or other network connected device. Smart lighting products can be stand-alone products or can be part of a home automation system that may also include various appliances and an integrated energy management system along with the lamps/luminaires.

Which companies offer smart lighting solutions?

Known for its focus on energy efficiency, Schneider Electric provides lighting systems for commercial and residential spaces. Their smart lighting solutions emphasize sustainability, such as optimizing building lighting in office spaces to reduce energy usage while enhancing employee comfort. 6. Eaton.

What are the benefits of smart lighting systems?

Natural Language Processing: Smart lighting systems are now equipped with advanced voice control capabilities that understand context and complex commands. This improvement allows users to interact with their lighting systems more intuitively, making it easier to customize settings. 4. Gesture-Controlled Lighting.

What is a smart street light?

Often other protocols e.g. DALI are used. These features are typically used in the commercial sector; Economising – lighting sources including sensors/controls in order to optimise the operation, energy and financial savings. This category of smart products includes smart street lighting that dims when there is no traffic detected on the road.
