Solar Street Light Step-Down System

Overview

What is a solar street light?

A solar street light is a raised lighting system powered by a photovoltaic (PV) module charging a battery that runs an LED luminaire at night. Modern systems are off-grid, smart-controlled, and designed to operate through low-sun periods. Pole/brackets & wiring, optional sensors/remote monitoring.

How to design a solar street light?

1. Solar Street Lighting Demand Design Formula: $P_{LED} = E \times A / (\eta \times U \times K)$
Example: Road width 6m, distance between lights 25m, target illuminance 20 lx $\rightarrow P_{LED} = 20 \times (6 \times 25) / (0.85 \times 0.5 \times 0.75) = 20 \times 150 / 0.32 \approx 94W \rightarrow$ Choose a 100W LED module (Luminous flux 15,000 lm) 2. Solar Street Light Photovoltaic System Capacity Calculation Steps: 3.

How do solar street lights work?

Fundamentally, solar street lights operate as self-contained lighting systems that generate illumination for exterior spaces primarily through solar power. They are designed to be self-sufficient, converting solar energy into electrical power during the day and utilizing it to illuminate areas once night falls.

Can solar street lighting be used as a mainstream lighting solution?

Their adoption of solar street lighting has significantly contributed to their viability as a mainstream lighting solution. Batteries: Batteries act as the system's energy storage unit, storing the electricity generated by the solar panels.
