

# Solar Thermal Glass

## Overview

---

What are the different types of solar and thermal glass?

Our solar and thermal glass is available in different types. From invisible protection by in the form of a solar control coating on the glass (Briljant®) and mass-coloured glass and/or a reflective coating (Isolide Sun®), to fully integrated sun protection between the windows using Screenline®. Be inspired by our showcases.

What is solar and thermal glass?

Solar and thermal glass offer an environmentally friendly, energy-efficient solution without sacrificing daylight. Solar and thermal glass is used in offices, shops and public spaces, as well as in residential buildings. They offer a smart solution, especially for large window surfaces that get a lot of sunlight.

How does solar control glass work?

The indoor space remains bright but cooler compared to uncoated glass. In terms of thermal insulation performance, most of our solar control glass products - those with at least one silver coating, help reflect indoor heat back into the room and form a shield against the cold exterior.

Can solar control glass be combined with thermal insulating glass?

Solar control glass can be combined in an IGU with thermal insulating glass to further improve the thermal insulation performance and help keep temperatures comfortable for the building's occupants all year round. It can also be combined with laminated glass to provide safety and security features, as well as sound reduction.
