

WALMER ENERGY

# **Solar container communication station inverter supporting cabinet**

## Overview

---

The integrated containerized photovoltaic inverter station centralizes the key equipment required for grid-connected solar power systems — including AC/DC distribution, inverters, monitoring, and communication units — all housed within a specially designed, sealed container. What is an ABB inverter station?

The ABB inverter station design capitalizes on ABB's long experience in the development and manufacture of secondary substations for electrical authorities and major end-users worldwide in conventional power transmission installations. The station houses two ABB central inverters and embedded auxiliary power, monitoring and air filtration systems.

How does ABB inverter work?

It enables easy and rapid connection to a MV transformer station. Depending on the size of the PV power plant, several ABB inverter stations can be used to meet the capacity need. The housing is based on a standard, insulated, steel-framed 20-foot shipping container. The total package weighs only 10 metric tons.

What is a pvs800 central inverter?

ABB's PVS800 central inverters are the result of decades of industry experience and the use of proven frequency converter technology. As such the central inverters provide a highly efficient and cost-effective way to convert the direct current generated by solar modules into high-quality and CO 2-free alternating current.
