## Overview

---

Why are high voltage lithium battery systems used?

High voltage lithium battery systems are used for solar applications with an 8kW hybrid solar inverter, as opposed to low voltage systems whose DC voltage is usually 48V or 51.2V. Let's give an example in the solar lithium storage battery system field.

What is a high voltage battery pack?

Usually, we will become a low-voltage battery with a voltage below 100V, while a battery with a voltage above 100V is called a high-voltage battery.

What is a low voltage lithium battery system?

A low voltage lithium battery system usually refers to a parallel application system such as 48V or 51.2V battery system. In contrast, high voltage lithium battery systems have batteries connected in series to achieve a higher voltage, and require a high voltage DC main unit to manage this high voltage cluster.

What are the applications of HV lithium batteries?

In the solar power storage and renewable energy fields, HV lithium batteries have the following applications: this project is for peak shifting, especially for markets where electricity price has a big difference by timing.
