

Solar grid-connected inverter hardware production

Overview

Based on the principle and output characteristics of photovoltaic cells, this chapter mainly analyzes the MPPT method, develops a mathematical model for solar inverters, designs a grid-connected control method, and verifies the correctness of its theory through MATLAB simulation. This chapter will focus on the software and hardware design of photovoltaic grid-connected inverter systems, mainly including three aspects: the hardware design of the main circuit, the hardware design of the control circuit, and the design of the control software. Figure 1 shows the main circuit and control structure diagram of the solar grid-connected inverter experimental system. What is grid connected solar inverter?

Abstract—Grid connected solar inverter converts the DC electrical power from solar PV panel into the AC power suitable for injection into the utility grid. This paper discusses various control modules used for the developed grid tied solar inverter.

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.

How a grid tied solar inverter works?

Therefore, only active power is pumped into the grid. The grid tied solar inverter is implemented using simple basic control algorithms: Maximum Power Point Tracking (MPPT) control, DC voltage control, grid synchronization control and current controller. This paper discusses the above listed control blocks in detail.

What control modules are used for the developed grid tied solar inverter?

This paper discusses various control modules used for the developed grid tied solar inverter. The developed grid tied solar inverter uses a boost converter to

regulate the DC power from solar PV panels and converts the output of the boost converter into AC using a single phase DC to AC converter.
