# **Solar module monocrystalline silicon 620w**

## Overview

---

Which bifacial double glass module produces more energy?

The bifacial double glass module produces more energy. Our N-type models have superior bifaciality. This means that the rear side of the module can produce up to 85% of the energy generated by the front side. Thus, the panel generates more energy overall. Lower degradation means a higher return on investment.

What are the standard test conditions for a polycrystalline module?

**ELECTRICAL DATA** Data is given at Standard Test Conditions: Irradiance 1000W/m<sup>2</sup>, spectrum AM 1.5 and 25°C cell temperature All modules Polycrystalline except when indicated 'Mono' for Monocrystalline **SAFETY** NOTE Electrical installations should be carried out by a qualified technician. Handle chemicals with care as they are hazardous.

Are dayliff solar modules good?

The heart of all effective photovoltaic systems is an efficient and reliable solar module and there are none better than Dayliff PV Modules. All are sourced directly from leading global PV module manufacturers who comply with the highest standards of quality and durability and offer the following features:-  
High efficiency. [Read More](#)
