

# Solar panel inverter in Georgia

## Overview

---

How much do solar panels cost in Georgia?

Solar panels will save you a lot of money over time, but the upfront costs aren't cheap. The average Georgia homeowner needs a 12.35 kW solar panel system to cover their electricity needs, which comes out to \$31,703 before incentives. Prices range from \$26,948 to \$36,458, but after the federal tax credit, that drops by 30%.

Is Georgia a good state to install solar panels?

With higher than average electricity prices and abundant sunshine, Georgia's a pretty great state for solar energy. It may not have the best local solar incentives, but as a Georgian, you can still take advantage of solar's most valuable incentive, the Federal Tax Credit. Here's what you should know about installing solar panels in the Peach State.

Does Georgia offer net metering?

Georgia doesn't offer net metering, but some utility companies (including Georgia Power) offer a solar buyback program known as net billing. Under net billing, you'll earn some cash credit toward your energy bill when you send excess electricity from your solar panels to the grid—but it's a lot less than what you actually pay for electricity.

How much power does a solar panel produce per square foot?

Each year, solar panels get more and more efficient—that is, they produce more power per square foot. As of 2025, the most popular solar panels can produce about 450 watts of electricity when they're in full sunlight. If you want to make the most of your roof's solar potential, get panels with at least that much power output.
