What is a solar drive for water pumps?

A Solar Drive (for water pumps) is a type of electrical converter (essentially solar-powered VSDs) which converts the variable direct current (DC) output of a photovoltaic (PV) solar panel into alternating current (AC) that can be used by a local electrical water pump motor (also still allows for an AC input supply if required).

What is a solar power water pump?

Today, the biggest use of solar water pumps is to enable farmland irrigation in areas where there is no power. In addition to the cost of energy, solar power water pumps also indirectly eliminate transportation or transmission of electricity costs and fuel costs.
