Solar panels in Spain's electricity system

Overview

Does Spain have solar power?

Currently, Spain ranks third in the EU for its share of solar power in the electricity mix, following Hungary and Greece, and second in total solar generation after Germany. This growth reflects Spain's commitment to renewable energy and its strategic geographic advantage.

Is solar power a good investment in Spain?

Since he took power in 2018, energy developers have built solar parks, proved that power generation had attractive returns and pulled in capital from yield-hungry investors. In 2023 and 2024, Spain added more solar power capacity than any other European country except Germany, whose economy is more than twice its size.

How much does solar energy cost in Spain?

In the first quarter of 2024, the average PPA price for solar energy was €38.50 per megawatt-hour (MWh), positioning Spain as the most cost-effective market for solar PPAs in Europe. Wholesale electricity prices saw a significant surge throughout 2023.

Why is Spain not able to rely on solar energy?

But due to oversights or overconfidence, they say Spain has not adapted to its reliance on solar energy. Prices and demand are too low. Its grid and use of battery storage are behind the times. In a country that is a test case for renewables, the solar boom appears to have gone too far, too fast.
