# Solar panels on rural roofs in Türkiye

## Overview

---

How much solar capacity will be installed on Türkiye's rooftops?

It is therefore not clear what planned capacity will be installed on rooftops, land or water surfaces. Türkiye's technical potential of at least 120 GW of rooftop solar capacity indicates that rooftops will play an important role in achieving the country's solar energy capacity targets.

Does Türkiye have a solar roof?

Türkiye, which has ambitious solar targets, has a rooftop potential almost ten times its installed solar capacity. In addition to the current potential of roofs, tens of thousands of new buildings are being constructed every year in Türkiye with the rebuilding effort in the earthquake zone raising this figure even higher.

What is Turkey's rooftop solar potential?

Türkiye's rooftop solar potential is close to ten times its current installed solar capacity. The top three provinces for total rooftop solar potential are Istanbul (10.4 GW), Ankara (10.1 GW) and Izmir (9.3 GW), the provinces with the highest population.

Will Türkiye's policies lead to a rapid increase in rooftop solar installations?

In fact, the installed rooftop capacity doubled for two consecutive years and reached 3 GW in 2022. Despite being far behind in rooftop solar power potential, Türkiye's policies could likewise lead to a rapid increase in rooftop solar installations.
