Solar panels power outage

Overview

Why do solar panels shut off during a power outage?

Safety Shutdown: During a power outage, grid-tied systems automatically shut off to prevent electricity from backfeeding into the grid and to protect utility workers. Even though solar panels continue producing electricity during a power outage, grid-tied solar systems do not provide backup power on their own.

What happens if a solar panel goes out?

During a local power outage, your solar panels might continue to produce energy, but the system is programmed to cut off the connection to prevent accidental power flow. Without a battery back up system, the panels do not supply electricity to your home.

Can solar panels and batteries keep your home running during a power outage?

By creating your own little “island” of a home with solar panels and batteries, you can run essential appliances for days during a power outage. Read on to learn more about how to keep your home running during a power outage.

Do solar panels provide backup power during a blackout?

Even though solar panels continue producing electricity during a power outage, grid-tied solar systems do not provide backup power on their own. Without a battery storage system, your solar panels cannot power your home during a blackout. This design is a critical safety feature intended to protect both your home and the utility grid.
