

# Solar tempered glass tiles

## Overview

---

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

What are the advantages of tempered glass solar panels?

High-strength tempered glass (optional thickness: 6mm, 8mm, 10mm, 12mm or above) offers impact resistance, anti-slip properties, and high transparency. Protects internal battery cells from damage while improving light transmittance. Durable enough to allow pedestrians to walk directly on it. 2. Solar Panel Modules.

What is a goodwe solar roof tile?

The GoodWe Sunshine Series is an integrated solar roof tile solution for pitched rooftops to replace traditional solar panels and framework for a sleek, aesthetically-pleasing result, that also maximises your rooftop space for more solar production. The integrated tempered double-glass structure ensures the safety of the roof structure.

How long do solar tiles last?

The lifespan of solar tiles is 25 to 30 years. Steel roofing tiles and sturdy, durable glass solar tiles are used to construct solar roofs, which also come with sizeable warranties. Solar shingle installation can take up to a week. However, with routine maintenance, solar tiles can last longer than the typical 25–30 years.
