

# **Sophia Dual Carbon Energy Storage Project**

## Overview

---

How has China's Dual carbon goal impacted energy storage?

BEIJING, July 1 -- China's dual carbon goal and targeted policies have provided strong tailwinds, enabling the country's energy storage businesses to thrive amid the rapidly evolving market competition.

What is the Sophia Project?

These aspects are covered by the SOPHIA project. A 3 kWe-size pressurized HTE system, coupled to a concentrated solar energy source will be designed, fabricated and operated on-sun for proof of principle. Second, it will prove the concept of co-electrolysis at the stack level while operated also pressurized.

What is compressed carbon dioxide energy storage (CCES)?

They are now characterized as large-scale, long-lifetime and cost-effective energy storage systems. Compressed Carbon Dioxide Energy Storage (CCES) systems are based on the same technology but operate with CO<sub>2</sub> as working fluid. They allow liquid storage under non-extreme temperature conditions.

Are dynamic models necessary for storing CO<sub>2</sub> in liquid state?

In the last section, it has been seen that the most studied CCES are those storing CO<sub>2</sub> in liquid state in the low-pressure storage and that dynamic models are crucial to better understand the real process. However, the few dynamic studies proposed in the literature are only for gaseous storages.

## Sophia Dual Carbon Energy Storage Project

---

Sophia haibosichuang energy storage intelligent ...

Development orientation: NEVs, new-type energy storage, new materials, etc. Land area: 85,000 square meters. the Nanshan Intelligent Manufacturing Shenshan High

---

energy storage technology and dual carbon

In all generalized dual-carbon devices, the essence of energy storage is the charge storage into the carbonaceous electrodes in form of ionic states. On carbonaceous electrodes, the ways of ...
