# Storage solar panels with batteries

## Overview

---

Do solar panels need battery storage?

But without battery storage, your solar system only works during the day or when connected to the grid. That's where batteries come in. **What Does a Battery Storage System Do?**

A battery stores the extra electricity your solar panels generate during the day so you can use it: It's like having a power bank for your house.

**What is solar battery energy storage?**

This is where solar battery energy storage systems come into play. These systems store excess solar energy for later use, ensuring a continuous power supply even when the sun isn't shining. The concept of solar battery energy storage is gaining traction among homeowners, businesses, and governments.

**Should you invest in a solar battery energy storage system?**

Investing in a solar battery energy storage system offers numerous benefits, including: **Energy Independence:** Reduce reliance on the power grid and have access to energy anytime. **Cost Savings:** Lower electricity bills by using stored energy during peak hours when grid electricity is more expensive.

**How do solar panels & battery storage work?**

Solar panels help you generate power. Battery storage helps you keep that power for use when the sun isn't shining. The combo?

A 24/7 personal energy ecosystem. Let's start at square one. **How do solar panels work?**

They absorb sunlight and turn it into electricity (called DC power). An inverter then converts it into AC power for your home.
