Overview

What is a hydrogen project in Sweden?

The project's scope involves producing hydrogen via electrolysis, leveraging Sweden's abundant supply of renewable energy sources, primarily wind and hydropower. The use of advanced electrolysis technology will be a cornerstone of this venture. Electrolysis is a process that uses electricity to split water into hydrogen and oxygen.

Will Lhyfe become Sweden's largest green hydrogen production site?

These 10 MW projects would become Sweden's two largest green hydrogen production sites dedicated to the bulk * market. To complete this decisive FEED * phase, Lhyfe has partnered with Swedish hydrogen specialist Euromekanik and Norwegian electrolyser manufacturer Hystar. The Final Investment Decision (FID) is expected to be taken in 2026.

How much green hydrogen will Sweden produce by 2045?

- The proposal by the Swedish Energy Agency suggests a green hydrogen production target between 22-42 TWh of green hydrogen by 2030, and 44-84 TWh by 2045.
- The Swedish Energy Agency has proposed a total electrolyser capacity of 5 GW by 2030 and 15 GW by 2045.

What is a hydrogen map?

This interactive map is designed to showcase hydrogen projects and products across industries in Sweden and Finland. Developed by CH2ESS at Luleå University of Technology, the map provides valuable insights into the rapidly evolving hydrogen sector.
