

# **Tin foil on Laos outdoor base station**

## Overview

---

What is tin foil used for?

Tin foil is also used for some electrical capacitors and for wrapping high-quality chocolates. Some pure tin is still used for collapsible tubes for medicines and artists' paints, but the newest and most interesting application for pure tin is as a molten bath on which molten glass is cast, the “float glass” process.

When was tin foil invented?

Tin foil was marketed for food packaging in the late 1800s but left an off-taste. Aluminum foil was first produced in France and Switzerland in the early 1900s and in the United States by 1913. Neher patented a continuous rolling process in 1910; packaging was an early application. By 1921 the first foil-laminated paperboard carton was introduced.

Can tin foil be used to make nanoporous Sn-based powders?

Briefly, for example, Ortiz et al. 46 have proposed the fabrication of nanoporous Sn-based powders by anodization of tin foil in an oxalic acid electrolyte containing polyethyleneglycol.

Can tin foil be adapted to a prepared tooth surface?

In three studies, for instance, a tin foil was adapted to the prepared tooth surface and either weighed and related to a standard or the tin foil pieces were scanned and measured with computer-aided devices. 2017, The Science and Technology of Flexible Packaging Barry A. Morris
