# Turkmenistan outdoor signal base station

## Overview

---

Does Turkmenistan have satellite connectivity?

In summary, satellite connectivity in Turkmenistan exists behind the scenes for state use and select entities, but it is not a solution available to the general public under the current regime's policies.

What technology is used in Turkmenistan?

**Network Technologies:** Turkmenistan's fixed broadband is primarily ADSL/DSL over copper, with some fiber and cable in Ashgabat. There are a few thousand fixed broadband subscribers (421,000 "wired internet users" were officially counted in 2023, which is less than 8% of the population ). Mobile technology ranges from 2G up to LTE.

What is a base station antenna?

The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would not be possible. Radio waves have been used for communication for more than 100 years. Radio and television broadcasting are well-known examples of this.

Does Turkmenistan have a telecom policy?

**Regional Cooperation:** Turkmenistan has also engaged in some regional telecom discussions. It participates in the Regional Commonwealth in Communications (RCC), a post-Soviet telecom cooperation body.
