

# **UPS battery cabinet out of power**

## Overview

---

What does a battery cabinet power?

Battery cabinets are designed to hold batteries used to power an uninterruptible power supply (UPS) system. In the event of a power disruption or outage, the UPS system ensures that your devices continue to operate from the energy stored in the batteries in the battery cabinet.

What is the battery capacity of the UPS system?

The UPS system uses batteries in the battery cabinet to provide power during disruptions. The battery capacity is 34.6 kWh. The system is lithium-ion based and can support up to 5 MW in parallel.

Why do we need a backup battery cabinet?

Through cutting-edge research and innovation, advanced engineered power products for backup battery cabinets have become essential to our energy future. When the power goes out, battery backups ensure that the Internet, cloud-based data, financial and health records stay accessible.

How do you maintain a UPS battery?

Solution: Maintain UPS systems in climate-controlled, clean environments. Avoid placing batteries near heat sources or in areas with high vibration. Using proper ventilation and temperature monitoring can significantly extend battery life.

## UPS battery cabinet out of power
