What are the communication equipments of rooftop base stations

Overview

What is a rooftop Telecom Tower?

Rooftop telecom towers, often called rooftop cell towers or roof top antenna towers, are specialized structures installed on building rooftops to support antennas and equipment for wireless communication. Typically ranging from 3 to 30 meters in height, these towers use hot-dip galvanized steel (ASTM A123) for over 30 years of durability.

What are base stations & cell towers?

These structures facilitate the transmission and reception of signals between mobile devices and the wider network, enabling voice calls, text messages, and data services. Understanding the role and technology behind base stations and cell towers is key to appreciating how mobile networks operate and evolve to meet growing demands. Base Stations.

What is a telecom base station?

From making a phone call in a busy city to streaming videos in remote villages, the ability to stay connected relies on one critical piece of infrastructure: the telecom base station. Often hidden in plain sight on rooftops or towers, base stations are the backbone of modern mobile networks. What Is a Base Station?

What are the different types of base stations?

Some basic types of base stations are as follows: Macro-base stations are tall towers ranging from 50 to 200 feet in height, placed at strategic locations to provide maximum coverage in a given area. Those are equipped with large towers and antennas that transmit and receive radio signals from wireless devices.
