# What does the base station battery represent

## Overview

---

### What is a base battery system?

The Base battery system is built for performance and reliability. It combines a high-capacity lithium iron battery with intelligent software to optimize energy use. The Base battery system has three main components: the battery pack, inverter, and hub. The long white unit is the battery pack. We mount the battery pack on the ground.

### How does a base battery work?

This process is called grid-balancing. Base batteries deploy energy to the grid faster than any other service, which is how Base is able to recoup the cost of the battery equipment and keep prices low for homeowners. The charge level of your Base battery will naturally fluctuate over time, rising and falling throughout a multi-day cycle.

### Why do we need a base station?

Base stations not only enable today's communication, but also pave the way for tomorrow's networks—supporting higher speeds, lower latency, and new services. At EverExceed, we power this connectivity with advanced energy solutions tailored for telecom base stations, from lithium batteries to stacked solar systems.

### What is a base station in a mobile network?

Often hidden in plain sight on rooftops or towers, base stations are the backbone of modern mobile networks. **What Is a Base Station?**

A base station is a fixed point of communication between mobile devices and the wider telecom network. It transmits and receives radio signals, enabling your phone to access voice, data, and internet services.
