What is the PCS warehouse of the energy storage power station

Overview

What is energy storage power conversion system (PCS)?

The energy storage power conversion system (PCS) is an AC/DC side controllable four-quadrant operation converter device, which realizes the AC-DC bidirectional conversion of electric energy.

What is a power supply system (PCS)?

The PCS is the heart of two-way energy flow between the storage system and the power grid. Its primary functions include controlling the charging and discharging of the battery pack and managing AC/DC conversion. Using a controllable, four-quadrant operating converter, the PCS enables seamless bidirectional energy exchange.
