# What is the earliest solar container battery

## Overview

---

The first solar batteries were lead-acid batteries, which were used in early solar power systems. However, these batteries had limitations, such as short lifespans and low efficiency. Who invented storage battery?

In 1899, Swedish engineer Waldemar Jungner invented nickel-cadmium battery. This was a epoch-making battery as the origin of today's storage battery. In 1900, the great inventor Thomas Edison who was also known to commercialize filament lamps invented nickel-iron storage battery. It is called Edison battery.

Who invented a battery?

In 1888, a German called Carl Gassner invented a battery where there was no risk of the solution spilling. Because the battery would not spill even though it contained a liquid, Gassner's invention became known as the "dry cell" or "dry battery." In 1899, Swedish engineer Waldemar Jungner invented nickel-cadmium battery.

Who invented a dry battery?

It was discovered by another Italian named Alessandro Volta, whom the battery was named after, in 1800. Then, in 1868, a Frenchman called Georges Leclanché invented the "Leclanché cell." This was the origin of today's dry batteries, but it could be inconvenient to use as its ammonium chloride solution would spill over.

## What is the earliest solar container battery
