

# Whether to choose polycrystalline or monocrystalline solar panels

## Overview

---

Should you choose monocrystalline or polycrystalline solar panels?

Choosing between monocrystalline and polycrystalline solar panels depends on your energy needs, budget, and available space. Monocrystalline panels offer higher efficiency and better performance in limited space, while polycrystalline panels provide a more budget-friendly option with reliable output.

What is the difference between monocrystalline and polycrystalline panels?

Monocrystalline panels are made from a single, continuous crystal structure, usually produced from high purity silicon. Polycrystalline panels are made from multiple silicon crystals melted together, creating a less uniform structure. The difference in manufacturing leads to various outcomes in efficiency, cost, lifespan, and appearance.

What does a monocrystalline solar panel look like?

Monocrystalline panels are typically black with rounded edges and a uniform appearance. You can also check the product label or specifications provided by the manufacturer.

.

Which is more efficient polycrystalline or monocrystalline?

Which is more efficient?

Monocrystalline panels are typically a few percentage points more efficient than polycrystalline. That extra efficiency matters most when your roof area is limited or you want the highest watts per square foot.
