# Which is better 48v or 60v inverter

## Overview

---

Do I need a 12V or 48V inverter?

Simply put, if you have a 12V system, you need a 12V inverter; a 48V system requires a 48V inverter. Standard Pure Sine Wave inverters simply change DC power to AC power. Inverter Chargers handle this function plus allow you to charge your batteries off shore power or a generator. Renogy's 3500W Solar Inverter Charger is designed for a 48V system.

Is a 24V inverter better than a 48V?

At 48V it drops to a more reasonable 66A. This is actually better than you might think because power loss is proportional to current squared, so if you use your existing wiring and connectors the loss in them will be 4 times higher. A 24V inverter might be a bit cheaper, but you should consider the cost of replacing your wiring and fuses etc.

Which solar inverter should I Choose?

24V and 48V systems work better with modern MPPT solar charge controllers and high-voltage solar panels. Choosing between 12V, 24V, and 48V inverters depends on your power needs, available space, wiring budget, and long-term energy plans. Go with 12V for simplicity and light usage. Choose 24V for balanced performance and solar compatibility.

Should solar panels be 12V or 48V?

Previously, with 12V systems, that meant adding more panels, larger capacity charge controllers, and huge battery banks, plus all that beefy wiring. Now, many solar consumers with higher energy demands are moving away from 12V and toward 24V and 48V systems for overall cost-space-benefit.
